

# How to determine Research vs Quality Improvement projects: A Guideline and Checklist

# **Purpose:**

Differentiation between a research study and a quality improvement (QI) project can be difficult and confusing, as both involve implementing a change to address a problem and there can be overlap between their technical definitions. As such, guidelines and tools can be a helpful way for people to determine which category a project falls into. Upon completion of this checklist the user will be able to distinguish if the presented proposal is QI or research. QI will have and will not have certain elements that make it able to be exempt from an ethics review<sup>1,2</sup>.

|                | Research   | Quality Improvement   |  |
|----------------|--|---|--|
| Purpose        | A systematic investigation to establish facts, principles or   | To implement knowledge,<br>evaluate or improve a  |  |
|                | contribute to generalizable knowledge.   | process or program through<br>established/ accepted<br>standards.                               |  |
| Design         | Follows a rigid protocol that remains unchanged. Utilizes amendments.  | Adaptive, iterative design with PDSA Cycles.  |  |
| Mandate        | Activities not mandated by institution.  | Activities are mandated by institution as part of operations.                                   |  |
| Starting Point | Knowledge-seeking is<br>independent of routine care<br>and intended to answer a<br>question of test a hypothesis<br>with the intention of<br>contributing to generalizable<br>knowledge. | Knowledge-seeking is integral<br>to ongoing management<br>system for delivering health<br>care. |  |
| Population     | Usually involves a subset of   | Includes information on all   |  |

# **Characteristics of Research and Quality Improvement Projects:**

|                                  | individuals and specific          | affected by process or                                    |  |
|----------------------------------|-----------------------------------|---|--|
|                                  | -                                 |   |  |
| Benefits                         | sample size.                      | program change receiving.                                 |  |
| Benefits                         | May or may not benefit            | Immediately and directly                                  |  |
|                                  | current subjects; intended to     | benefits a process, system or                             |  |
|                                  | benefit future patients           | program; might or might not                               |  |
|                                  |                                   | benefit patients  |  |
| Risks                            | May put subjects at risk with     | No increased risk to patients, with exception of possible |  |
|                                  | consent                           |   |  |
|                                  |                                   | patients' privacy or                                      |  |
|                                  |                                   | confidentiality of data.                                  |  |
|                                  |                                   | Consent not always needed.                                |  |
| Data Collection Strategy         | Systematic data guided            | Systematic data guided                                    |  |
| Testing or Analysis              | Statistically prove or disprove   | Compare program, process<br>or system to establish        |  |
|                                  | a hypothesis                      |   |  |
|                                  |                                   | standards   |  |
| Effect on program or             | Findings of the study are         | Finding of the study are                                  |  |
| practice                         | generally not expected to         | expected to directly and                                  |  |
|                                  | immediately affect or change      | immediately affect  |  |
|                                  | practice                          | institutional practice                                    |  |
| Adoption of Results              | Dissemination of results may      | Dissemination of results occurs rapidly and adopted       |  |
|                                  | require more time                 |   |  |
|                                  |                                   | into local care delivery                                  |  |
| Endpoint                         | Answer a research question        | Improve a program, process                                |  |
|                                  | and/ or invite critical           | or system   |  |
|                                  | appraisal of that conclusion      |   |  |
|                                  | by peers through                  |   |  |
|                                  | presentation                      |   |  |
| Publication/ Presentation        | Intent to publish generally       | Intent to publish may or may                              |  |
|                                  | presumed at the onset of the      | not be presumed at the                                    |  |
|                                  | project                           | onset of the project but QI                               |  |
|                                  |                                   | practitioners are encouraged                              |  |
|                                  |                                   | to share systematic reporting                             |  |
|                                  |                                   | of insights   |  |

| Consideration  | Question   | Yes | No |
|--|--|-----|----|
| PURPOSE  | <ul> <li>Is the primary aim or motive of the project either to:</li> <li>Improve care right now for the next patient seen?</li> <li>OR</li> <li>Improve operations or efficiency?</li> </ul>   |     | 1  |
| RATIONALE  | Is there sufficient evidence for, or acceptance of, this mode or<br>approach to support implementing this activity or to create<br>practice change, based on:  |     |    |
| METHODS 1  | Are the proposed methods flexible and customizable, and do they incorporate rapid evaluation, feedback and incremental changes?  |     |    |
| METHODS 2  | <ul> <li>Do the methods include any of the following?</li> <li>Control group</li> <li>Randomization</li> <li>Fixed protocol</li> </ul>   |     |    |
| RISK   | Is the risk related to the project minimal and no more than<br>usual care (including the unavoidable minimal risk in<br>implementing any changes made in processes of care)?   |     |    |
| PARTICIPANTS   | Will the activity only involve participants (patients, parents,<br>or WDMH or partners staff) who are ordinarily seen, cared<br>for, or work in the setting where the activity will take place?  |     |    |
| FUNDING  | <ul> <li>Is the project funded by any of the following?</li> <li>An outside organization with an interest in the results</li> <li>A manufacturer with an interest in the outcome of the project relevant to its products</li> <li>A non-profit foundation that typically funds research, or by internal research accounts</li> </ul> |     |    |
| If all of the check marks are inside the shaded gray boxes, then the project is very likely QI and not human subjects research. Projects that are not human subjects research do not need review by the REB. |  |     |    |
|  | the project changes it is recommended to refer back to this<br>ssess the need for an ethics review if uncertain if still a QI  |     |    |

# Checklist: \*

\*The table above is adapted from: Children's Hospital of Philadelphia Research Institute - IRB

An inquiry can be made by email to the WDMH ethics committee by emailing research@wdmh.on.ca

## Characteristics of a QI project that do not determine the need for REB Review:

- Intent to publish both QI and research may be published.
- Process of data collection both QI and research may include prospective or retrospective data collection and may collect data on living/deceased individuals.

## **Clarifications for publishing QI work:**

- Do not refer to QI projects as research in publications or presentations.
- If the project was not submitted to the REB for determination, the following statement may be included in the manuscript: *"This project was undertaken as a Quality Improvement Initiative and as such does not constitute human subjects research."*
- If the project was reviewed by the REB and was determined not to be human subjects research, the following statement can be included in the manuscript: *"This Quality Improvement Initiative was reviewed and determined to not meet the criteria for human subjects research by the Winchester District Memorial Hospital Research Ethics Board."*

#### Declaration

- I confirm that the information answered above is true and is an accurate reflection of the project.
- If the project is determined to be a quality improvement project, it will be exempt from an ethics review/ approval process.
